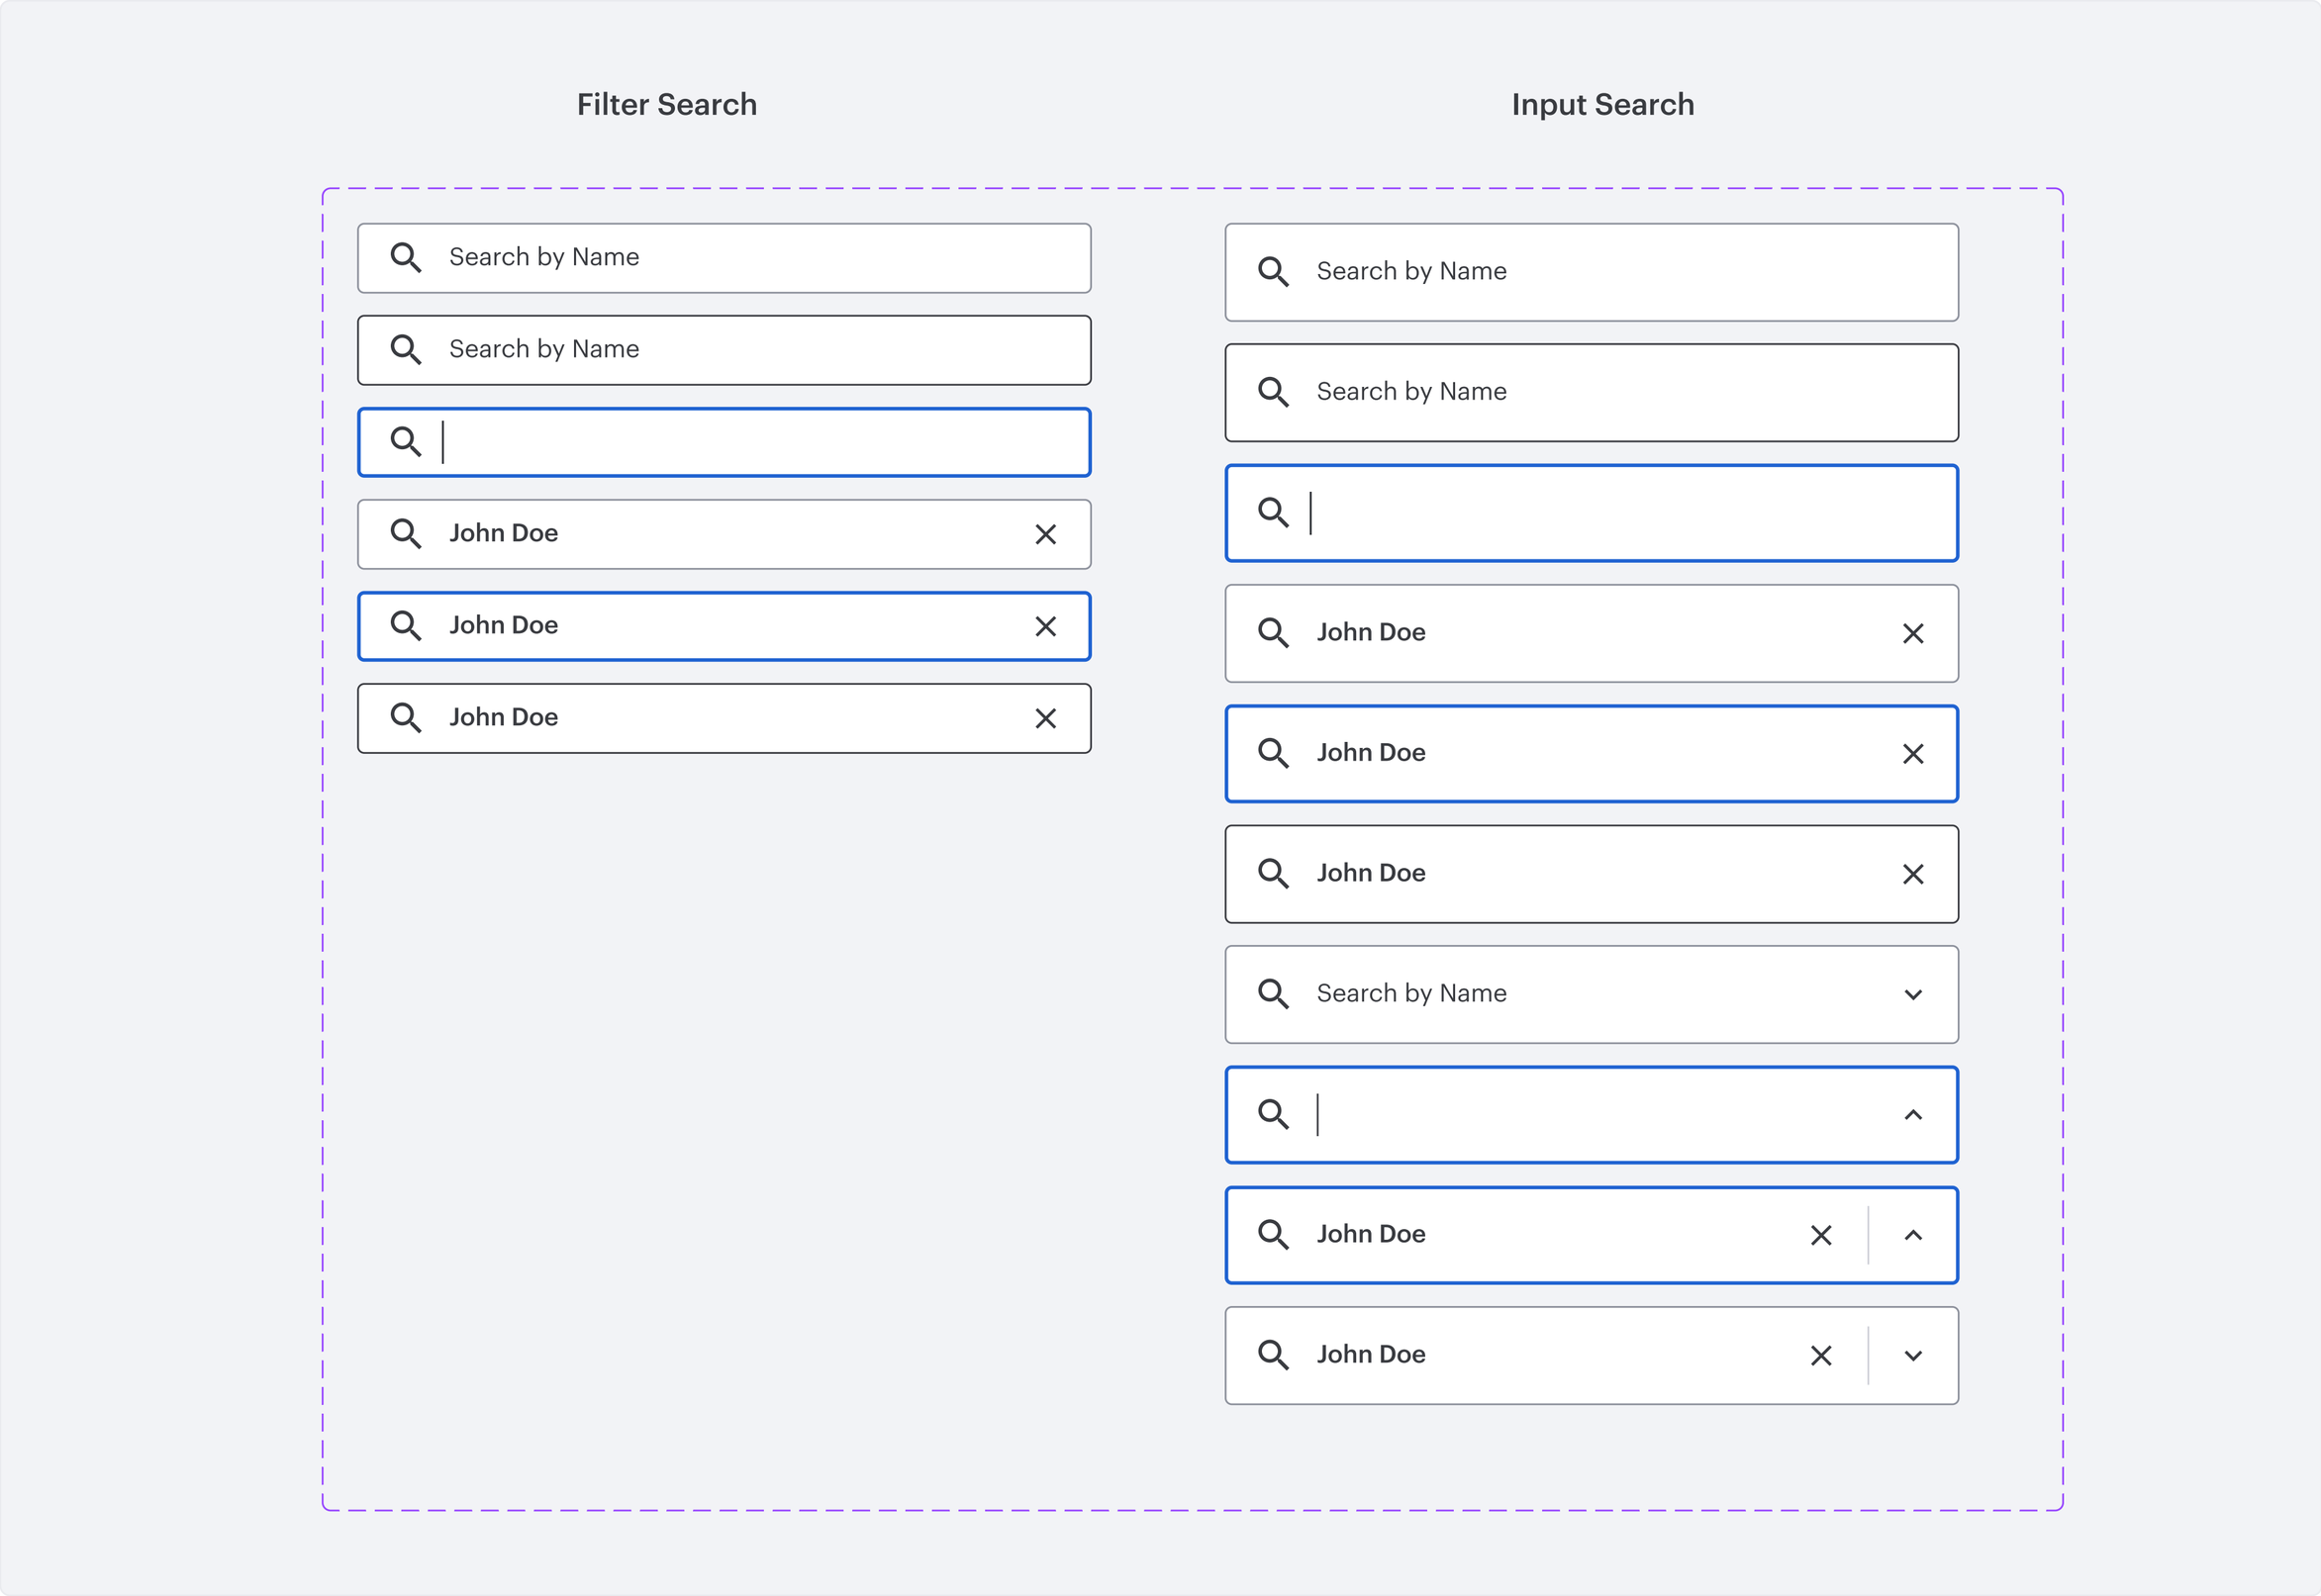
Search

Main Component

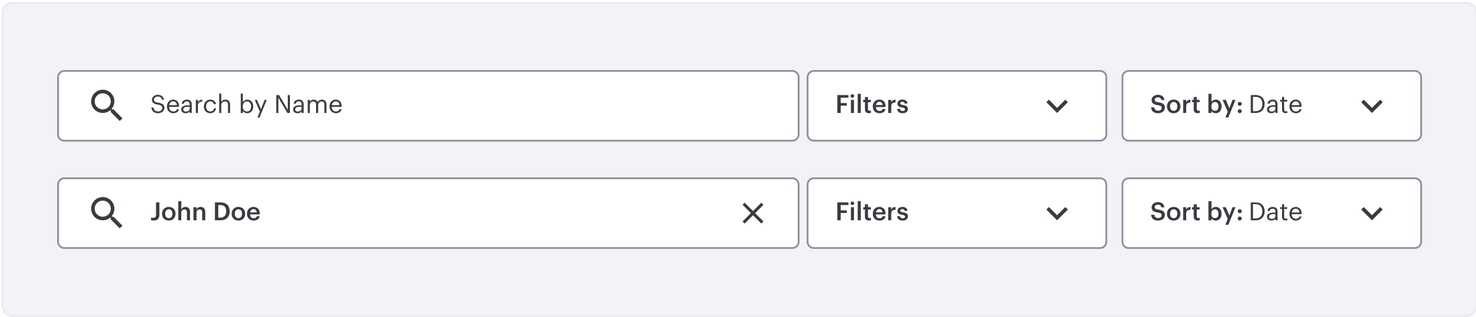
Search icon will change when inputting characters. Clicking on the “X” icon will clear all current input.



VARIATIONS

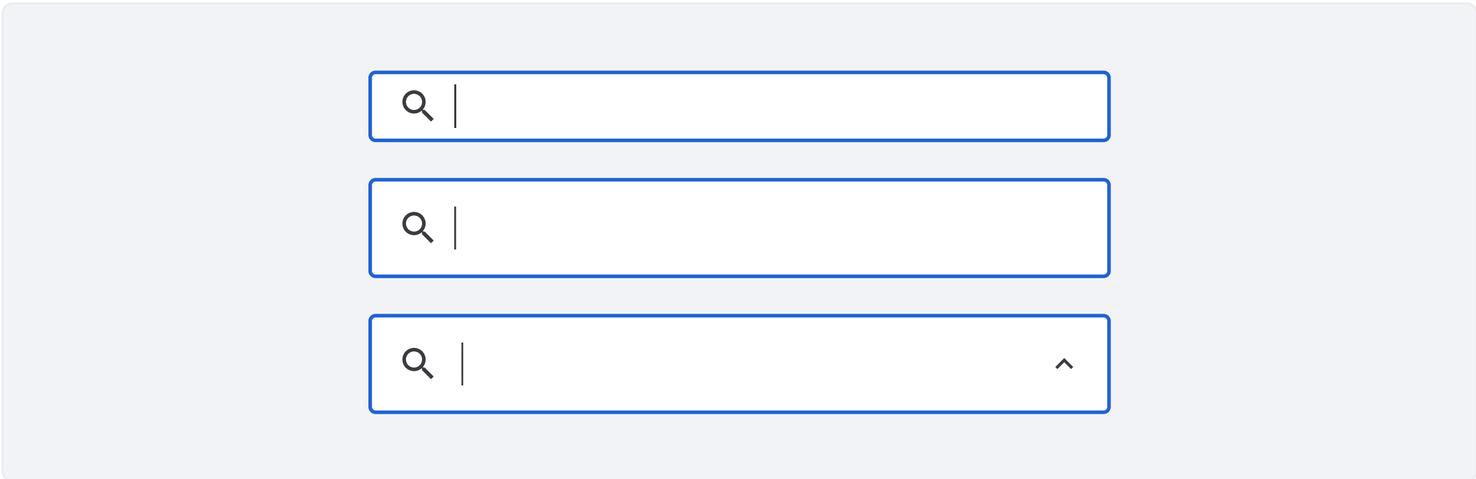
Filter Search

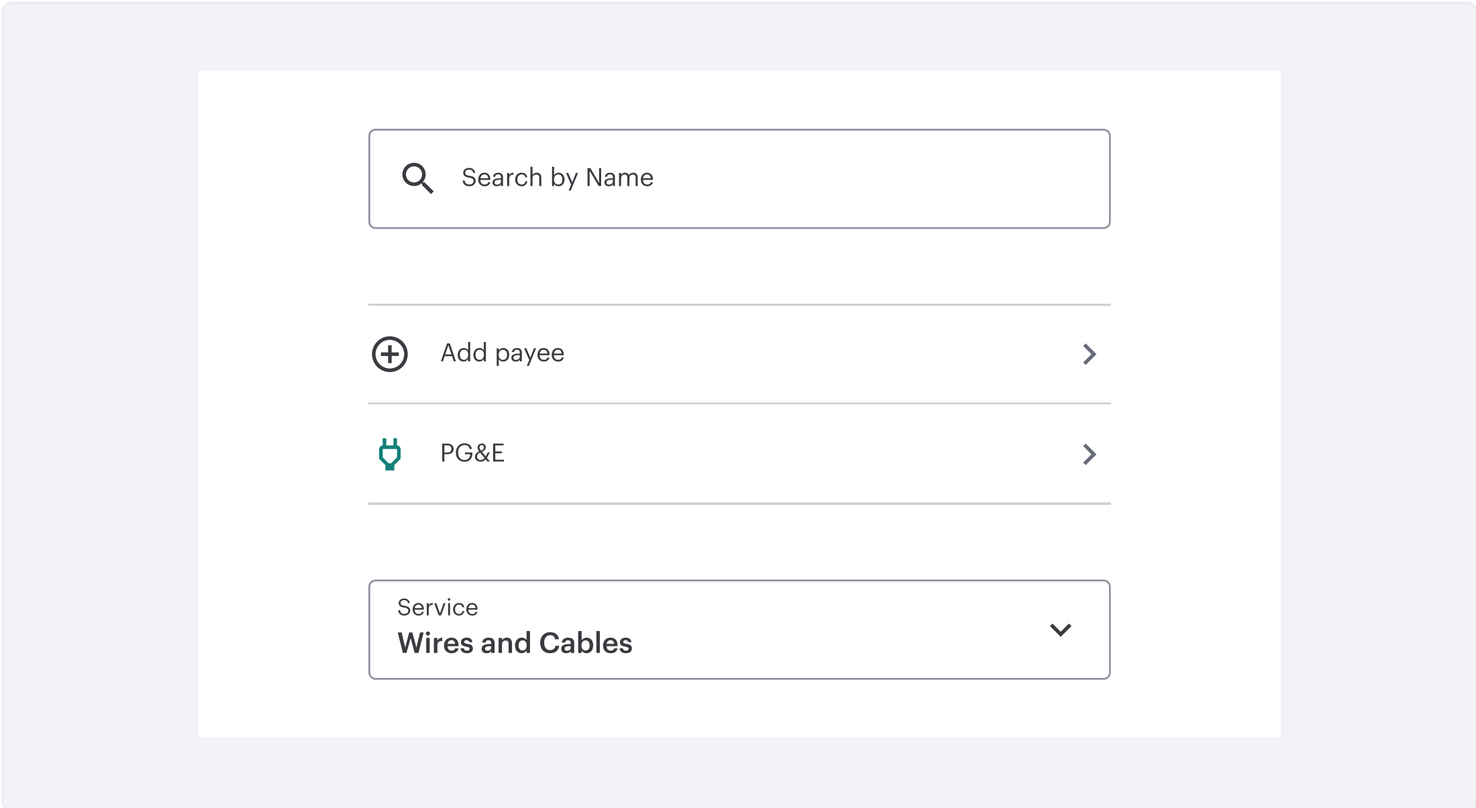
Filter search allows users to search for items within a list, table, or other databases. Filter search can be used alongside filter and sorting components. Searched items will show up in the database container/table.



Focus State

Search can be navigated using the **Tab** key on the keyboard. A blue border appears around the component when the focus state is applied.



Input Search


Input search is used with a dropdown menu containing related items.
