Donut Chart

The Donut Chart is a circular chart used to visualize parts of a whole. It's useful for representing proportions, percentages, and categorical data. Unlike a pie chart, a donut chart has an inner radius that creates a “hole” in the center, which can optionally be used to display additional information.

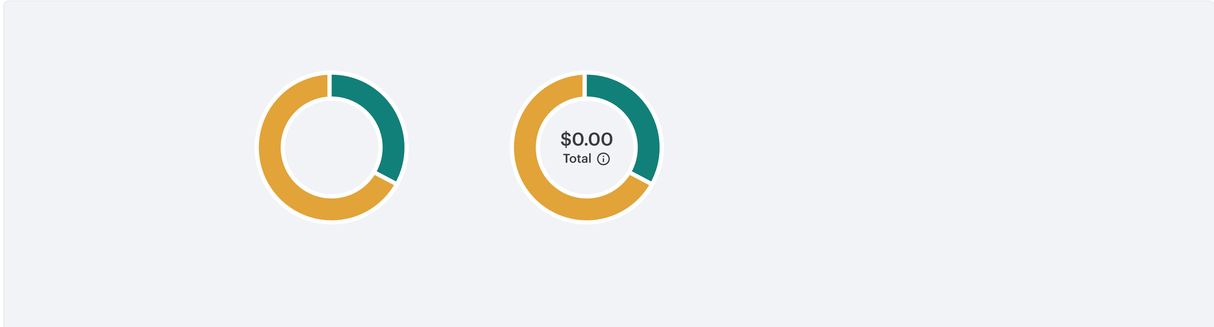
COMPONENT PROPERTIES AND CUSTOMIZATION

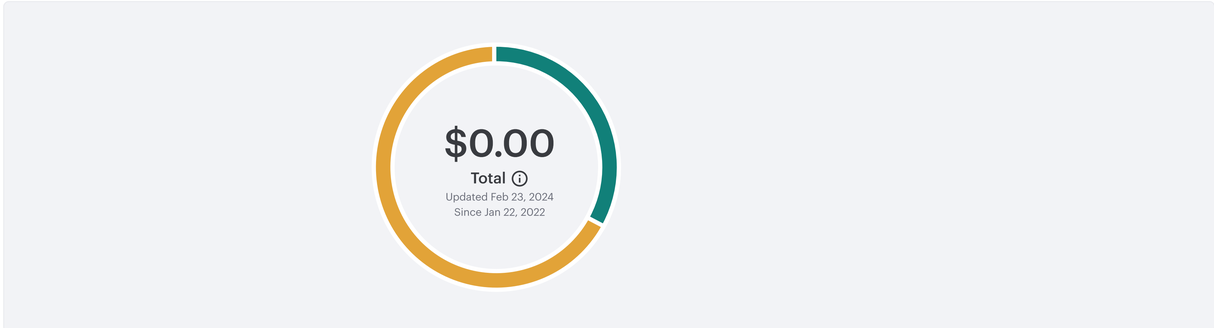
Desktop donut chart properties

We can show label and a tooltip inside the desktop version. Here are the two variations, with and without the label.
We avoid showing a lot of content within the donut for Desktop chart



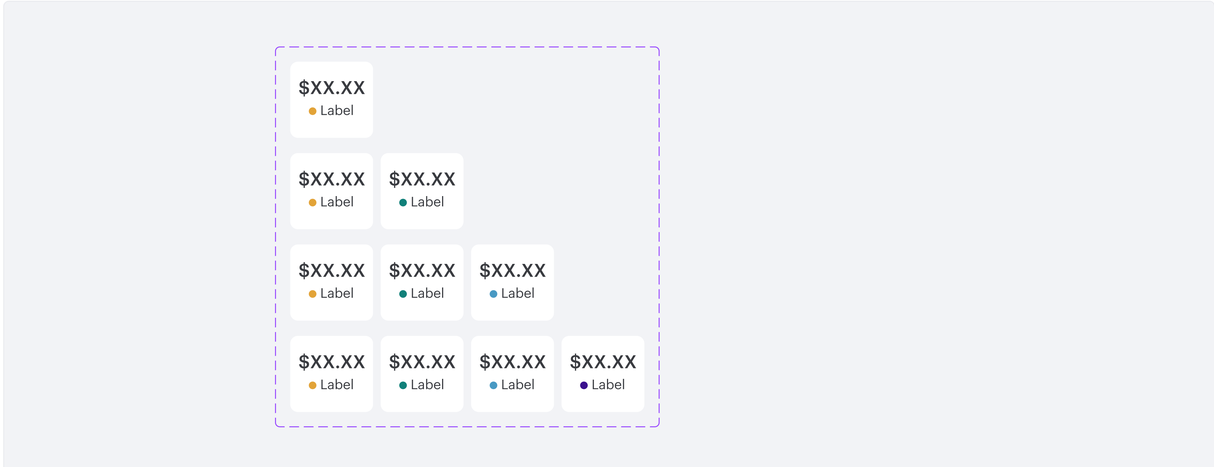
Mobile donut chart properties

We can show tooltip as well as date property as per the use case.



Legend

Displays what each color in the chart represents, typically positioned outside the chart.



OPTIONAL GUIDANCE BLOCKS

Do:

Add guidance on how to use a component.

- Avoid using too much text inside the donut chart, as it may become difficult to read.
- Ensure that colors have sufficient contrast for accessibility and use distinct colors for each slice to avoid confusion.
- Recommended to begin the first segment from the top 90 degree for consistency in visual interpretation
