# URC "HorizontalRule"

## BASE

### HorizontalRule

The `HorizontalRule` element represents a thematic break between paragraph-level elements: for example, a change of scene in a story, or a shift of topic within a section.

---

You should favor CSS border when possible, but this can be useful in cases where adding the border to a container is not possible and/or would require way more work.

---

You can set different `margin` values

---

in case the default margin is not what you expect.

---

You can even set the margin to `none`

---

or you can

---

set the `marginBottom`

---

or set the `marginTop` individually
