Use Instance Of This In Your File

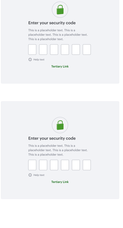
USAGE

Digit Divided Input

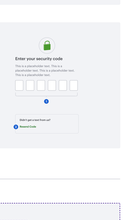
The Digit Divided Input allows users to enter a one-time passcode received through SMS, two factor authentication, or email in a segmented input field.



VARIATIONS

Focus State

The Focus state is designed to indicate the input field is currently active and ready to receive user input



Loading State

The loading state appears when the system is verifying the entered code. It typically displays a message like "Verifying..." to inform users that their input is being processed and a spinner around the pictogram.

Resend Code

The resend code state appears after 1 minute if the user hasn't received their code. This state provides a clear path for users to request a new code by clicking "Resend Code" option, allowing the user to request a new code if the original one hasn't arrived.

Success State

The success state indicates that the entered code has been verified successfully. It typically displays a checkmark or similar visual element confirming the user that their code is correct and the verification process is complete.

Error State

The error state appears when the entered code is incorrect or invalid. This is visually highlighted, typically with red borders around the input fields, indicating that the code needs correction. Below the input, an alert box can be used to show the error message.

OPTIONAL ITEMS

Pictogram

Pictogram is optional and can be turned off based on the specific use case. It can be optional in scenarios like verifying SSN or other secure identification processes.

Title + Description

Title + Description is optional and can be turned off based on the specific use case. It can be optional in scenarios like verifying SSN or other secure identification processes.

Help Text

The help text is optional and can be used to provide additional guidance or instructions to users. This is available in Default and Focus states.

Tertiary Link

The tertiary link in the Digit Divided Input is typically used for providing supplementary actions related to the main task. This is available in Default and Focus states.

FOCUS ORDER

GUIDELINES

Do:

Include concise instructions or a help text to guide users on how to enter their code, such as "We sent your 6-digit code to ex@gmail.com. It will be valid for 10 minutes."

Don'T:

Use OTP components for any other purposes, such as passwords.
