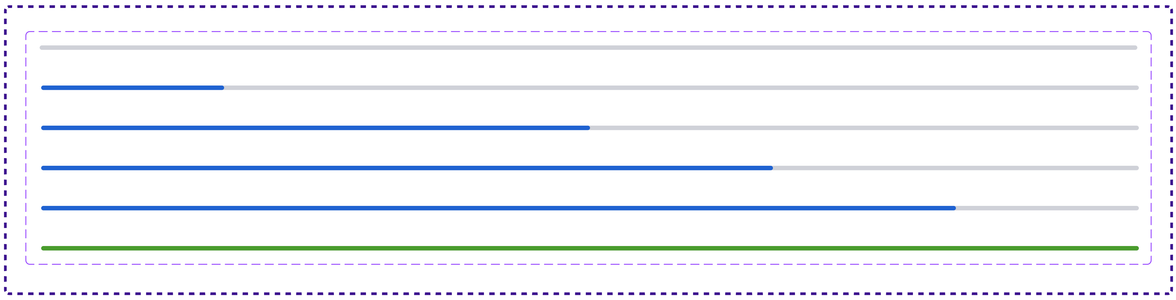
Progress Bar

Showing progress towards completion or towards a goal

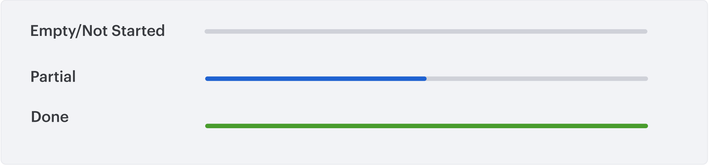
Main Components

Use Instance Of This In Your File



VARIATIONS

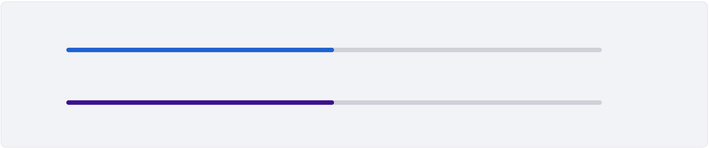
State



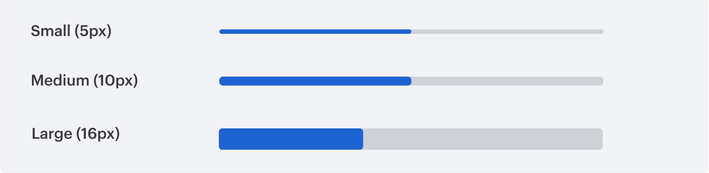
Color

The color of the **partial** bar can vary.

Background color is always `backgroundInactive`
Done state is always `semanticPositive`

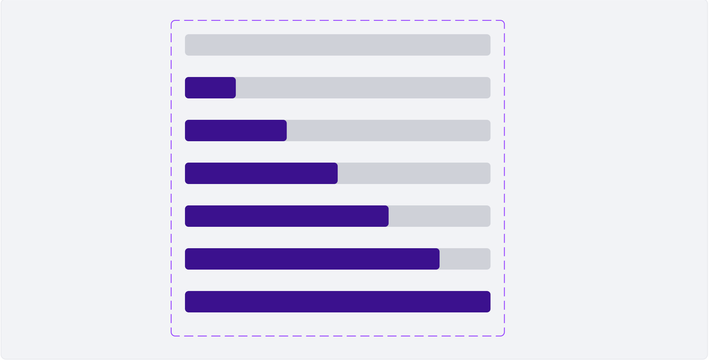


Size



Animation

Real time changes in the progress bar width should be animated. When used as a loading indicator, the bar should animate until done.



PROPERTIES

Border radius

Border radius of the bar and container should always be 4px.

Don't:

Use two progress bars that look the same that indicate totally different things in the same flow. This is a good reason to vary the color and size.

Credit Tips

Credit Card Usage has a high impact on your score. Using less than 30% of your available credit is a good goal, but keep in mind that using some available credit and paying it off monthly may be better than not using any credit at all.
