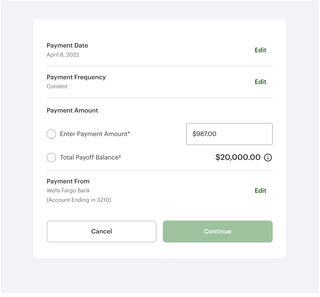
ROWS GUIDELINES

Form Rows

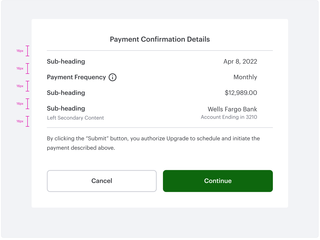
Form rows can be used interchangeably with other types of rows. Groups are separated with dividers. Rows can be resized horizontally on mobile. Form rows don't require additional spacing when stacked on top of each other.



Read Only Rows

Rows are grouped together, bounded by dividers. Rows are generally spaced 16px, but can be spaced 24px apart depending on use cases.

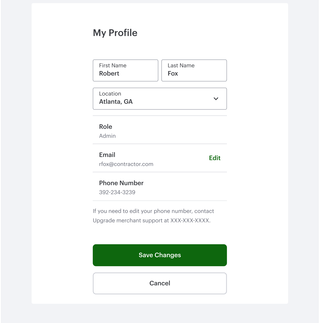
Example use cases:
- Confirmation modals/ pages
- Receipts
- Short summaries



Input Form Rows

Input form rows emphasize the value/ content of each row. They are used in forms containing primarily inputs. Input form rows don't require additional spacing when stacked on top of each other.

Example use cases:
- Profile (editable)
- Customer information (editable)



Balance Table

A simple table to display 2 columns
- Rows are nested in the table
