Selectable Tiles

A selectable tile is used to represent an option that can be selected by the user, typically as part of a group of choices.

USAGE

Offer Tile

An offer tile is used to present a payment plan, allowing users to easily compare details such as monthly cost, down payment, interest rate, and total amount.

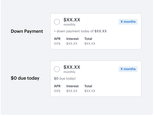
Selection Tile

A selection tile is used to allow users to choose one or multiple options visually from a set of available choices such as selecting a country of residence or components for a trip.

VARIATIONS

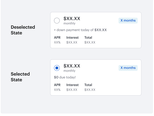
Payment Plan

These two variations of the payment plan offer different initial payment options: one requires a down payment today, while the other allows users to start with $0 due.



Selected State

The offer tile has two variations, showing the selected and deselected states of the radio button to indicate whether the user has chosen a particular payment plan option.



Focus State

Selectable tiles can be navigated using the **Tab** key on the keyboard. A blue border appears around the component when the focus state is applied.

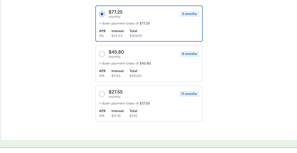
GUIDELINES

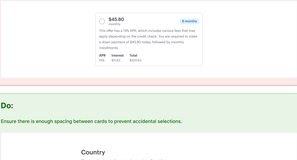
Do:

Provide visual feedback such as the selected state of the card clearly.



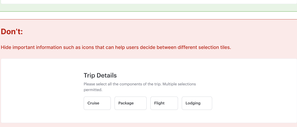
Don't:

Avoid putting too much text or data; it can overwhelm users.



Do:

Ensure there is enough spacing between cards to prevent accidental selections.



Don't:

Hide important information such as icons that can help users decide between different selection tiles.
