Focus Order

When you add notes to Focus Order items, they will appear here.

Accessibility Notes

When you add ARIA, VoiceOver, TalkBack, Narrator, React Native, or General notes, they will appear here.

Landmarks

When you add notes to Landmark items, they will appear here.

Icon Set

We use a very large repository of icons based on the style of Google Material Icons, called Material Design Icons.

Material Design Icons

We're using a very large repository of icons based on the style of Google Material Icons, called Material Design Icons.

How to use (Designers)

Because this icon set contains thousands of icons, it's important that we maintain consistency in which icons from the set we're using. To do this, DSM 2 will only contain components of icons we're actually using, and when we need to use another from the set, it should be added.

Video Walkthrough Of Adding Icons

Do:

First search DSM 2 for "our material icons" to find if we use a similar icon already.

Keep the original name of the icon as the component name. This allows developers to inspect and use the correct icon easily.

Don't:

Directly link to the full library without adding it to DSM 2 so other designers know we use it. If you are finding a new icon directly from the full Material Design Icons community file, please add a component to DSM 2 and link that one.

Icons in Use

When you use a new icon from the large Material Design Icons library, add it here so we can be consistent and easily find our commonly used icons.

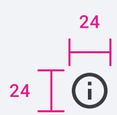
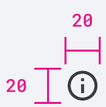
Icon Sizing

Most icons should use the default size of 24×24



Size	**Medium (default)**	**Small**	**XS**
Uses	Most use cases	Directly with small low emphasis text, if needed	In hint text or error message of input fields
