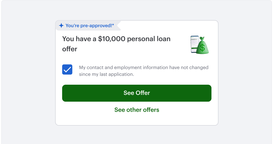
USAGE

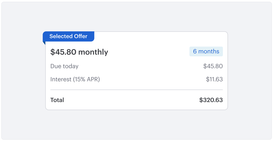
Highlight Ribbon

The highlight ribbon is effectively used in components that include a Call to Action (CTA) to draw attention to the most important element or message of the component.



Selection Ribbon

The selection ribbon is suitable for components that do not include a CTA but instead need to convey a particular state or attribute, such as being selected or highlighted for some specific reason.



Highlight Ribbon Box (Detachable)

The Highlight Ribbon Box is designed with the correct spacing and positioning, allowing you to easily grab it without needing to recreate the absolute positioning. You can detach it and move your content into it seamlessly.

Selection Ribbon Box (Detachable)

The Selection Ribbon Box is designed with the correct spacing and positioning, allowing you to easily grab it without needing to recreate the absolute positioning. You can detach it and move your content into it seamlessly.

OPTIONAL ITEMS

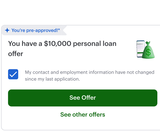
Icons

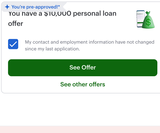
Highlight Ribbon can have an optional icon slot on the left.

GUIDELINES

Do:

Use short, clear text on ribbons to ensure readability and avoid truncation. Aim for under 30 characters.



Don't:


Overlap important UI elements or obstruct readability.
